University of Georgia **Expected Grad: May 2027**
BBA in Economics **GPA: 3.00/4.00**

SKILLS

Languages: *TypeScript, JavaScript, Python, HTML/CSS*

Tech: *Web Speech API, REST/WebSocket, SQLite*

Relevant Coursework: *Python for Business Analytics, Linear Algebra, Multivariable Calculus*

WORK EXPERIENCE

J.P. Morgan Chase, *Product Operations Analyst – Card*, Philadelphia, PA Summer 2025

- Scaled six JIRA automations across 12 Chase Card product teams — stakeholder pings, blocker escalations, and aging-WIP nudges — cutting redundant status checks and accelerating resolution of stalled work.
- Automated Definition-of-Done gatekeeping, release-note generation, and executive weekly snapshots, reducing audit errors and saving ~10% of PM reporting time.

Georgia Tech Milton Stewart School of ISyE, *Undergrad Research Assistant*, Atlanta, GA Summer 2024

- Analyzed MARTA's six-month pilot program data to identify trends and designed a subsidy framework targeting peak demand periods, improving transportation access for 8,000+ riders and prioritizing 1,100+ transportation-disadvantaged individuals.
- Proposed a prescheduling feature to streamline operations, optimizing driver schedules and reducing riders' per-stop wait times by 25%, which is projected to decrease annual administrative costs by 20% and improve overall service efficiency.

Novak Francella CPA, *Audit Intern*, Boston, MA Summer 2023

- Evaluated controls & identified discrepancies in six labor union audits to reduce senior auditor's manual review by over 50% while preparing detailed working papers and reconciliations to substantiate findings and support audit opinions.

FEATURED PROJECTS

Lengua — *TypeScript · Web Speech API* AI Product

- Shipped live as my grandmother's real-time Spanish conversation aid — turn-based Grandma/Me suggestions in Santiago/Cibao dialect and formal *usted* that carry our conversations past small talk.
- Built privacy in from the start: no audio is ever stored, transcripts live only in session storage, and either of us can delete everything in one tap.

Kalshi Mispricing Arbitrage Engine — *Python · WebSocket · SQLite* Quantitative Finance

- Built test-first to catch structural price inconsistencies on Kalshi end to end — REST/WebSocket ingestion with RSA-PSS auth persisted to SQLite, so candidate mispricings surface instead of sitting in raw market data.
- Built a live dashboard in the Kalshi brand kit with plain-English labels and a "how to read this" guide, so surfaced opportunities can be reviewed at a glance.

VOLUNTEER LEADERSHIP EXPERIENCE

UGA Career Center. *Mentor Program Ambassador*, Athens, GA January 2025 – December 2025

- Partnered with executive board members across 6+ student organizations to promote the Mentor Program website, reaching 200+ students and converting the underutilized resource into a consistent engagement channel.
- Consolidated Faculty Feature Form marketing and digital thank-you card system, boosting faculty nominations by 35% and engaging 50+ students through reusable QR resources at tabling events.

Black Business Student Association, *Director of Community Development*, Athens, GA December 2023 – May 2026

- Spearheaded a joint BBSA x BMLS professional development workshop for 50+ students, leading sessions on office attire, tie-tying, and resume reformatting, and coordinating breakout groups with executives to deliver tailored 1-on-1 feedback.
- Directed a 4-week internal BBSA merch competition with 15+ members competing to design annual apparel, promoting entrepreneurship, marketing skills, and peer-driven selection through 100+ member votes.
